

Manlift Training Whitby

Manlift Training Whitby - Different manlift training programs include the review and content of manlift devices. An essential portion of the course is the practicum where students demonstrate their practical ability and knowledge to operate the manlift safely. A prerequisite to Manlift training is the fall protection training, which could be incorporated in the training based on the particular requirements of the customer.

Course Content

The course consists of the following areas of instruction: pre-shift machine inspection and work area survey requirements; the effect of doing unsafe acts or operating unsafe equipment, Lifting device machine definitions, Review of load capabilities, safety decals and specific equipment requirements, Review of related sections of the CSA Standards and the OHSA Standards and Review site specific Hazards, together with controls for safe operation of a lifting device.

Demonstration and Evaluation Content

Demonstration and evaluation content comprises: Utilizing a signaler or a spotter when needed; Proper personal protective equipment or likewise referred to as P.P.E. as required; Utilizing a correct fitting harness or fall arrest device; Utilizing a lift only on solid and level ground; Aware of load limits etc. and other specs set out by the manufacturer; Using the lift with all other employees clear of the job site; Having all associated machine safely stored on the lift platform; Pre-shift work area survey and equipment inspection; Isolating off the work area when major work projects are to be carried out; and ensuring a smooth and safe operating speed for different plant conditions

Every person will be tested to make sure they can safely and efficiently operate your site-specific machinery.

Manlift Safety

Manlifts can be really dangerous machines since they are capable of lifting an employee 20' or higher in the air and that creates a particular amount of risk. Since the danger is so apparent, lift operators and owners are careful to properly maintain their equipment and follow proper operating procedures and safety measures. The ratio of accidents involving this particular equipment is quite low.

The safety specifications for boom lifts and scissor lifts puts the burden for safe manlift operation on the user. You are responsible for knowing how to safely use the lift even if you only lease the machinery for one day. The most basic safety features on the machine are safety decals and the operating guidebook. These show essential information about the operating procedures, safety machines and maintenance.

A new model of manlift will come together with the necessary decals in place and operating manuals. The operating manual must be found on the equipment at all times. If you are purchasing a second-hand lift, it is important to ensure that the instruction booklet is included and that important decals haven't been painted over. The restraints which prevent operators from falling and the guardrails are other vital safety features. These are mandatory and standard on all kinds of lifts.
