

Aerial Lift Train the Trainer Whitby

Aerial Lift Train the Trainer Whitby - The train the trainer program designed for aerial lifts helps to teach the trainers how to safely train potential operators in an industrial setting. Trainers will be provided with in-depth instruction on the workings of aerial lift machines. The program is provided on an open enrollment basis and delivered at select training sites. Before the certification, trainers are assessed and scored on their demonstrated skills and understanding.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the number one training provider in the business, we give the best hands-on training possible through chances to practice techniques and concepts learned in the classroom. Along with hands-on experience, trainers develop general understanding of instructional methods and machinery theory, field and classroom communication skills, and ability to effectively train and evaluate operators. Trainers will gain an understanding of what traits make a successful trainer.

The Aerial Lifts Train the Trainer Program also teaches the correct techniques necessary to express the correct information within the classroom and field setting. There are three aspects of equipment operation that the trainer should learn how to convey to operators: what to do; how to do it; and the reason why it must be carried out.

In the program, trainers would be given the latest, detailed reference material to better help them convey the information to machine operators. The manuals used, contain detailed information on all aspects of industrial mobile equipment operator training. Included in the package are training aids that provide a visual reference in order to enhance the learning experience. The equipment-specific training products include necessary materials intended for both the operator and the trainer: videos/DVD's, overhead transparencies, safety message posters, kinds of equipment; stability pyramids and digital training aids.
