

## **Manlift Ticket Whitby**

Manlift Ticket Whitby - The Manlifts and Elevated Platforms program provides training on the regulations, rules and correct application of safe operating procedures and work practices involved in daily activities for those who work using this equipment. The course has been designed for individuals who are actively involved in these activities or those who have a basic knowledge of this machine.

During the last couple of decades, aerial platforms and manlifts have become a common sight in industrial maintenance applications and on construction job sites. These machines provide an easy way to lift staff near what must be carried out on a stable platform apparatus, enabling staff to do tasks with greater comfort and safety rather than being perched on top of ladders or scaffoldings.

The manlift is similar to other industrial tools in that they are safe when utilized correctly. As they elevate staff above floor or ground level, accidents could easily take place and this may result in serious death or injuries for both the manlift operators and any passerby who might not be lucky enough to be standing below.

There are a variety of models of manlifts. Most fall into 1 of 2 categories: the articulating boom lift, which has the capability of both vertical and horizontal movement and the scissors lift, that is capable of moving up and down.
