## **Manlift Certification Whitby**

Manlift Certification Whitby - The Elevated Platforms and Manlifts Certification program helps to provide the required training on the safe operating procedures, work practice, rules and regulations regarding the everyday activities for the operators of this equipment. The course has been designed for people who are actively involved in these activities or those who have a basic knowledge of this machine.

During the past couple of decades, aerial platforms and manlifts have become a common sight on construction job sites and in industrial maintenance applications. These machines provide an easy way to lift workers near what should be done on a stable platform apparatus, allowing employees to perform tasks with greater safety and comfort rather than being perched on top of ladders or scaffoldings.

Similar to every other device, manlifts are just safe when they are utilized correctly. Because they elevate employees above floor or ground level, accidents can easily occur and this can lead to serious death or injuries for both the operators of the manlift as well as any passerby who may not be lucky enough to be standing underneath.

There are various models of manlifts. The majority fall into 1 of 2 categories: the articulating boom lift, that has the capability of both vertical and horizontal movement and the scissors lift, that is capable of moving upward and downward.

## **Protecting Staff**

It is essential to provide correct training for you operators. A lot of businesses that rent these machinery would provide on site training. Each worker who would be working on the machinery or operating it has to receive training in safe operations. It is also vital that just those workers who have received training must be authorized to operate the controls. Operating procedures and communication rules should be clear. Thus, employees on the ground should not operate controls without the knowledge and approval of any staff in the basket.

The staff that occupy the basket will be required to wear the correct fall protection gear that includes a harness and lanyard. The fall protection connects to the manlift easily. The employee must make certain that he or she has made whichever adjustments required to reflect the change in fall distance if there are changes in the height of the work area.

Manlifts must be tested and inspected each and every day to make sure they are in safe operating condition. Prior to utilizing the equipment, whichever defects need to be re-inspected and fixed.
